## CAREER OBJECTIVE

---

Aspiring to leverage my foundational knowledge in systems administration, database optimization, and troubleshooting to contribute effectively to a dynamic organization. With a strong focus on customer satisfaction, technical problem-solving, and a keen interest in cloud computing and networking, I aim to enhance my skills in Linux/Unix systems administration, programming, and DevOps. Motivated to work in a challenging environment, including night shifts, where I can grow professionally while driving impactful results.

## SKILLS

---

### *Technical Skills*

- **Programming Languages:** Java
- **Frameworks:** HTML, CSS, JavaScript
- **Database Management:** MySQL, Relational Database Design
- **Core Concepts:** Object-Oriented Programming, Networking
- **Others:** Cloud Computing, AWS, Salesforce, Tableau and Microsoft PowerBI

### *Non-Technical Skills*

- Excellent at coordinating and collaborating with every member in a team.
- Can give my best even in the case of time constraints.
- Excellent at handling multiple tasks and delegating among fellow members.
- Active participant in discussions, meetings and reviews.
- Can communicate and handle team and ideas.

## PROJECTS

---

### **E-Commerce Website**

- Built a real-time Smoothie ordering website using JavaScript.
- Designed a responsive UI using Bootstrap.
- Ensured data storage and availability using MySQL.

### **E – Learning Platform**

- Developed a website which allows the students to plan their sessions with faculty based on requirement.
- Chatbot inclusive which helps the student in this whole process.
- Used MySQL for data storage which is used while finding available faculty.

### **Launching the Employee Directory Application on Amazon EC2**

- Launch employee directory application on Ec2 and also create amazon VPC and Internet gateway, Route tables, Network ACL's, Peering Connection.
